

Write a blog on the difference between document and window object.

DOCUMENT OBJECT	WINDOW OBJECT
<ul style="list-style-type: none">• The Document object represents the HTML documents• It has properties and methods that can be used to access and modify the document content, structure and style.• The document object represents a webpage that is loaded in the browser.• It is the object of the window property.• All tags, elements with attributes in HTML are part of the documents.• We can access the document from a window using the window.document• The document is part of BOM (Browser Object Model) and DOM (Document Object Model).• Properties of document object such as title, body, cookies, etc can also be accessed by a window like this window.document.title• Syntax: document.propertyname;• Example: document.title: will return the title of the document.	<ul style="list-style-type: none">• The Window object represents the browser window in which the HTML document is being displayed.• It has properties and methods that can be used to access and modify the window's size, position and behaviour.• Window object represents a browser window or frame that displays the contents of the webpage.• It is the object of the browser.• Global objects, functions and variables of javascript are members of the window object.• We can access the document from a window using the window.document• The window is part of BOM, not DOM.• Properties of the window object cannot be accessed by the document object.• Syntax: window.propertyname;• Example: window.innerHeight: will return the height of the content area of the browser.
